## The Journal of Paraphysics

Volume IV, Issue 1

Winter Solstice, 2007

*Edited by James E. Beichler*

This journal is dedicated to both the explanation of paranormal phenomena within the context of physics and extending the science of physics into other areas of study which are normally considered beyond the scope of physics. This journal will offer a forum where refereed papers can be presented without prior prejudice toward either their content or subject matter. The material presented will span all levels of knowledge. Knowledge cannot be reserved for those who are highly educated, but is the right of all who search it out. It is hoped that this journal will prove interesting to the self-educated reader as well as the professional scientist. The ideas and content of the articles will be stressed rather than the "scholarly" language of presentation, as long as the proper norms of presentation are preserved. The journal will also offer a forum where issues concerning the conceptual bases of physics and the validity of advances in the science of physics into the paranormal and elsewhere can be openly discussed. As an electronic journal, the editors have far more latitude for the presentation of ideas than would normally occur in a hardcopy journal and this latitude will be utilized whenever necessary. The format of this journal will surely change in the first few issues, but the philosophy behind its publication will not change.

**Nobraner Unification  
with no strings attached**

An Editorial!

by James Beichler

The superstring and brane theories have strayed too far from reality and their physical roots to be seriously considered as legitimate physics. They are no more than philosophical and mathematical theories in spite of their great popularity. Otherwise, they are bad physics and just plain wrong. They also suffer from a great many logical errors that would seem to be fatal for any other group of theories. However, if the logical errors are corrected, then the latest of the brane models morphs into a completely different model that is actually correct and falsifiable.

**Consciousness and its materialization**

by Ronald Bryan

Professor Bryan proposes an experiment to test the hypothesis that a human can influence the spin (and thus motion) of a single electron by intent and conscious will alone. He briefly explains how consciousness might effect flipping the electron spin by associating consciousness with a five-dimensional physical field. In this respect, he relates his own personal experiences to the experiment and notes similar theoretical research that has been conducted by other scientists.

**Single Field unification and 'Quantum' Consciousness**

by James E. Beichler

This paper was originally offered as a poster at the first Quantum Mind conference in 1999, but never published until now. The paper first describes and discusses the five-dimensional 'single field theory' from a purely physical perspective and then uses the resulting theoretical model to explain the nature of life, mind and consciousness. These 'quantities' result from natural evolutionary processes within the single field. This physical model of consciousness is then used to explain paranormal phenomena, NDEs and mystical enlightenment. [A PDF file]

### CALL FOR PAPERS

Anyone wishing to publish an article dealing with any aspect of parapsychics should contact the editor. Do not send complete papers for consideration unless requested to do so. Please send a message describing your paper and/or a short summary with a return address. All general comments and suggestions concerning the journal, as well as messages regarding the submission of papers, should be sent by e-mail to "jebco1st@aol.com."

### THE OPEN FORUM

After an article has been published, anyone who wishes to comment on the article is invited to do so. These comments will appear in an open forum in later issues with rebuttals or further explanations by the author and editors as deemed necessary. All responses to published articles are welcome. True progress in science comes only after new concepts are understood by the larger community of scientists and other interested parties, and the open discussion of new concepts is an important part of that understanding process.

### SUBSCRIPTIONS

Access to the journal over the Internet/WWW is free. It is not necessary to preregister for a subscription. However, it is requested that you register for a subscription if you plan to read the journal on a regular basis. If we know who is subscribing, we can better serve those interested in parapsychics. Subscription forms will be made available at a later date.
