

YGGDRASIL

The Journal of Paraphysics

Volume II, Issue 3

All Hallows Eve, 2000

Edited by James E. Beichler

This journal is dedicated to both the explanation of paranormal phenomena within the context of physics and extending the science of physics into areas of study that are normally considered beyond the scope of physics. This journal will offer a forum where refereed papers can be presented without prior prejudice toward either their content or subject matter. The material presented will span all levels of knowledge. Knowledge cannot be reserved for those who are highly educated, but is the right of all who search it out. It is hoped that this journal will prove interesting to the self-educated reader as well as the professional scientist. The ideas and content of the articles will be stressed rather than the "scholarly" language of presentation, as long as the proper norms of presentation are preserved. The journal will also offer a forum where issues concerning the conceptual bases of physics and the validity of advance in the science of physics into the paranormal and elsewhere can be openly discussed. As an electronic journal, the editors have far more latitude for the presentation of ideas than would normally occur in a hardcopy journal and this latitude will be utilized whenever necessary. The format of this journal will surely change in the first few issues, but the philosophy behind its publication will not change.

CURRENT CONTENTS

[Psi, Mental Disorders and the Unified Field](#)

An Editorial!

By Jonathan C. Jobe

Dr. Jobe suggests that psi should be considered relevant to the problem when diagnosing common mental disorders and discusses other issues in the study of psi.
[25 kb]

[On Mind and the Physics of Paranormal Phenomena](#)

By John White

John White discusses the role of physics in the progress of paranormal research as well as the relationship between paranormal studies and the concept of mind.
This essay was originally published in *The Meeting of Science and Spirit*. [56kb]

[Life and Death in the Big City: The geometrical structure of dying](#)

By James Beichler

In recent years, the study of Near Death Experiences (NDEs) has given science its first possible vision of what may exist for consciousness after individual death. However, little has been said about the physics that may help to explain the nature of the dying experience in light of these recent discoveries. This paper represents an attempt to deal with the nature of death from the perspective of the Single Field Theory (SOFT). [101 kb]

THE PARAPHYSICS DISCUSSION FORUM for Volume II, Issue 3

The "Paraphysics Discussion Forum" is a platform for readers to debate issues and topics relevant to modern thought in science. All readers are invited to join the discussion by sending their responses to the editor of this journal. Depending on the amount of response to these questions and topics, readers' opinions will be posted in coming issues of the *Yggdrasil*. If you send a response to the editor, please note whether you wish your name to be published or whether you wish your response to appear anonymously. The privacy of readers and correspondents will be respected.

[QUESTION #1](#)

What is the present moment of time?

QUESTION #2

If western science and society do not accept psi phenomena as real, why is the practice of psi so prevalent in movies, television and the popular press?

[Issue 2](#)

Pre-publication copies of upcoming articles will be made available to anyone who wishes to referee them. Anyone wishing to act as a referee for these or any other paper can obtain a pre-publication copy of the papers by sending an e-mail request to the editor at "jebco1st@aol.com." Comments on the pre-publication copy should be sent to the editor at the same address. These comments will be collected and forwarded to the author for final corrections before publication. Once an article has been published, it will not be changed so that final copies of the journal can be published. Referees will be expected to supply [appropriate information](#) to demonstrate some expertise in the subject of the pre-publication paper. Otherwise, anyone can referee any paper for which a pre-publication summary has appeared. The extent to which comments are considered valid by the editorial staff will depend upon any referee's demonstrated knowledge in the subject area, as determined by the editorial staff. All pre-publication comments will be held in the strictest confidence. All comments are welcome!

REQUEST FOR REFEREES AND EDITORS

Anyone who wishes to act as a [referee or editor](#) on a more permanent basis is cordially invited to contact the editor. The early success of this journal will depend on those who are interested enough to help make it a success.

CALL FOR PAPERS

Anyone wishing to publish an article dealing with any aspect of parapsysics should contact the editor. Do not send complete papers for consideration unless requested to do so. Please send a message describing your paper and/or a short summary with a return address. All general comments and suggestions concerning the journal, as well as messages regarding the submission of papers, should be sent by e-mail to "jebco1st@aol.com."

THE OPEN FORUM

After an article has been published, anyone who wishes to comment on the article is invited to do so. These comments will appear in an open forum in later issues with rebuttals or further explanations by the author and editors as deemed necessary. All responses to published articles are welcome. True progress in science comes only after the larger community of scientists and other interested parties understands new concepts, and the open discussion of new concepts is an important part of that understanding process.

SUBSCRIPTIONS

Access to the journal over the Internet/WWW is free. It is not necessary to pre-register for a subscription. However, it is requested that you register for a subscription if you plan to read the journal on a regular basis. If we know who is subscribing, we can better serve those interested in parapsysics. Subscription forms will be made available at a later date.
